MARKET OVERVIEW

EUROZONE

The soft patch in the eurozone was confirmed this week. After peaking at 60.6 in December, business confidence eroded further, from 56.2 to 55.5 in May. Sentiment also worsened in the services sector, hitting 53.9, while the consensus was for 54.7.

UNITED KINGDOM

Headline inflation continued its decline from 3.1% YoY in November 2017 to 2.4% in April 2018. On a month-on-month basis, inflation rose 0.5% versus 0.1% in March.

UNITED STATES

Initial jobless claims hit 234k in May versus an expected 220k.

ASIA & EMERGING COUNTRIES

After a peak at 1.5% in February – the highest since 2015 – Japanese consumer price inflation fell to 0.6% versus 0.7% expected.

THEME OF THE WEEK

Dollar recovery – will it last?

Dollar recovery – will it last?

Since mid-April, the dollar has recovered around 5% after falling steadily since late 2016 (source: Bloomberg). But has the tide really turned?

Admittedly, several factors have supported the US dollar:

- *Slightly higher US yields. Rising nominal rates and tame inflation have seen US real rates creep up and the 10- year real yield is approaching 1% for the first time since 2013;*
- *Strong US growth prospects. The tax boost is supporting business activity and the broader economy; and*
- *A growing yield gap vs other developed markets. Market expectations have risen for three more Fed hikes in 2018 and three in 2019.*

And, in the meantime, the euro has also been hit by:

- *Disappointing growth data and weaker leading indicators. Economic surprises have plummeted since early 2018;*
- *Fear of budget slippage in Italy. The formation of a eurosceptic coalition advocating a spending spree (up to 5.5% of GDP, according to Bloomberg) and the roll-back of structural reforms have seen Italian spreads widen by 80 basis points albeit with limited contagion effect in other peripheral countries; and*
- *Doubts about when the European Central Bank will shift policy tighter. Inflation remains stubbornly low and growth is losing momentum.*

Furthermore, dollar strength and higher US rates have weighed on most emerging currencies and the negative effect has been strong enough to offset the positive impact of rising oil prices on commodity-related currencies.

Bottom line. The dollar should continue to recover but only in the short term. Despite the tax boost, we would not expect US growth to accelerate sharply in coming quarters and 2019 could even see a downturn that would encourage the US Federal Reserve to act more gradually. Moreover, recent dovish Fed minutes could signal that the US central bank may let inflation overshoot its target, which could dent into US real interest rates. Finally, US 10-year Treasury yields are left with limited upside after a pick-up in the first semester.

Market News

EUROZONE

The soft patch in the eurozone was confirmed this week. After peaking at 60.6 in December, business confidence eroded further, from 56.2 to 55.5 in May. Sentiment also worsened in the services sector, hitting 53.9, while the consensus was for 54.7.

Consumer confidence also deteriorated from 0.3 to 0.2 in May but remains in its 2018 range.

This week's key events

		Period	Prev.	Cons.
31 May	Unemployment rate	Apr	8.5%	8.5%
31 May	Consumer prices, YoY	May P	1.2%	1.6%

UNITED KINGDOM

Headline inflation continued its decline from 3.1% YoY in November 2017 to 2.4% in April 2018. On a month-on-month basis, inflation rose 0.5% versus 0.1% in March.

GDP growth printed at 0.1% QoQ in Q1, down from 0.4% in Q4 2017.

Exports disappointed forecasts, hitting -0.5% QoQ in Q1 against an expected 0.4%. Imports fell 0.6% QoQ, while consensus was for 0.1%.

This week's key events

		Period	Prev.	Cons.
01 Jun	Manufacturing confidence	May	53.9	53.5

UNITED STATES

Initial jobless claims hit 234k in May versus an expected 220k.

The US Federal Reserve's national activity index pointed to slightly stronger economic activity in April, printing at 0.34 versus 0.32 in March.

This week's key events

		Period	Prev.	Cons.
01 Jun	Unemployment rate	May	3.9%	3.9%
01 Jun	ISM Manufacturing	May	57.3	58.1

ASIA & EMERGING COUNTRIES

After a peak at 1.5% in February – the highest since 2015 – Japanese consumer price inflation fell to 0.6% versus 0.7% expected.

Despite economic expansion, Japanese corporate confidence slipped in May, from 53.8 in April to 52.5.

This week's key events

		Period	Prev.	Cons.
30 May	Japan: retail sales, YoY	Apr	1.0%	0.9%
31 May	China: manufacturing confidence	May	51.4	51.4

GLOSSARY

Accommodative Monetary Policy: when a central bank attempts to expand the overall money supply to boost the economy when growth is slowing by lowering the interest rate or by purchasing Treasury bonds.

Basis Points: A unit that is equal to 1/ 100th of 1% and used to denote the change in a financial instrument.

Bear: an investor who believes, for any technical or fundamental reason, that a security or the broader market will decline significantly. A bear takes the appropriate steps to limit losses during the period that they believe that the security will decline.

Ibovespa Index: The Ibovespa Index is a gross total return index weighted by traded volume & is comprised of the most liquid stocks traded on the Sao Paulo Stock Exchange.

BoC: Central Bank of Canada

BoE: Central Bank of England

BoJ: Central Bank of Japan

CPI (Consumer Price Index): measures changes in the price level of a market basket of consumer goods and services purchased by households.

Credit risk: credit risk is the chance that a bond issuer will not make the coupon payments or principal repayment to its bondholders. In other words, it is the chance the issuer will default.

Deflation: a general decline in prices, often caused by a reduction in the supply of money or credit. Deflation can be caused also by a decrease in government, personal or investment spending.

EPS (Earnings Per Share): the portion of a company's profit allocated to each outstanding share of common stock. Earnings per share serves as an indicator of a company's profitability.

ECB (European Central Bank): created in 1998, the European Central Bank determines the monetary policy to be adopted within the Eurozone. To do so, it has various means, in particular the key interest rates. The ECB is responsible for the single currency. Its main mission consists of maintaining price stability within the Euro zone.

EM/ EC (Emerging markets/ countries): markets/ countries in the process of rapid growth and industrialization.

Equity Risk Premium: The excess return that an individual stock or the overall stock market provides over a risk-free rate.

Eurostoxx50: A market capitalization-weighted stock index of 50 large, blue-chip European companies operating within eurozone nations.

Fed (Federal Reserve): central bank of the United States and controls the money supply.

FOMC (Federal Open Market Committee): The branch of the Federal Reserve Board that determines the direction of monetary policy.

Guaranteed capital: on maturity, a capital-guaranteed structured product repays a minimum 100% of the capital invested on expiry. However, the investor bears the risk associated with the issuer of a structured product. If the issuer defaults, there is a risk of loss of capital.

Hang Seng index (Hong-Kong Index): A market capitalization-weighted index of 40 of the largest companies that trade on the Hong Kong Exchange. The index aims to capture the leadership of the Hong Kong exchange, and covers approximately 65% of its total market capitalization.

Investment-grade bonds: a rating that indicates that a municipal or corporate bond has a relatively low risk of default.

ISM Manufacturing Index: monitors employment, production inventories, new orders and supplier deliveries.

Issuer: in the case of a structured product, an issuer is an entity that issues and distributes investment products. An issuer may be a bank or a company created specifically for this purpose. In the case of a bond, an issuer is an entity (government, company, government agency etc.) that issues bonds and borrows the amounts required for its financing.

Long/ Short Strategy: An investing strategy of taking long positions in stocks that are expected to appreciate and short positions in stocks that are expected to decline.

Maturity date: in finance, maturity or maturity date refers to the final payment date of a loan or other financial instrument, at which point the principal (and all remaining interest) is due to be paid. The term fixed maturity is applicable to any form of financial instrument under which the loan is due to be repaid on a fixed date.

MSCI World Index: index designed to provide a broad measure of equity-market performance throughout the world. The Index is maintained by Morgan Stanley Capital International, and is comprised of stocks from both developed and emerging markets.

Overweight: An analyst's opinion regarding the future performance of a security. Overweight will usually signify that the security is expected to outperform either its industry, sector or, even, the market altogether.

P/B Value (Price/ Book value): a ratio used to compare a stock's market value to its book value. It is calculated by dividing the current closing price of the stock by the latest quarter's book value per share.

P/E ratio (Price/Earning ratio): the ratio [Share price/earnings per share] reflects the trading price of a share in relation to the expected earnings. As such, the higher this ratio, the more expensive the stock, and vice versa. Note: the P/E ratio also depends on profit growth; companies with high profit growth tend to have a higher P/E.

PMI composite : composite of five of the survey indices. These are New orders, Output, Employment, Suppliers' delivery times (inverted) and Stocks of purchases

PMI (Purchasing Managers Index): Economic indicator of the manufacturing sector.

Protected capital: a product with protected capital does not guarantee the repayment of all the capital invested on maturity. The main risk associated with this type of product is a risk of capital loss, linked to fluctuations in the capital markets. There is a risk part or all of the capital may not be returned, depending on the type of protection.

QE (Quantative Easing): An unconventional monetary policy in which a central bank purchases government securities or other securities from the market in order to lower interest rates and increase the money supply.

Quarterly Earnings Report: A quarterly filing made by public companies to report their performance. Included in earnings reports are items such as net income, earnings per share, earnings from continuing operations and net sales. These reports follow the end of each quarter. Most companies file in January, April, July and October.

S&P500 (SPX Index): An index of 500 stocks chosen for market size, liquidity and industry grouping, among other factors. The S&P 500 is designed to be a leading indicator of U.S. equities and is meant to reflect the risk/return characteristics of the large cap universe.

Structured product: structured products are investment solutions comprised of a number of financial instruments. They combine one or more financial assets such as equities, currencies, interest rates etc. with a more sophisticated options component.

Topix stock index: an index that measures stock prices on the Tokyo Stock Exchange (TSE).

Underweight: An analyst's opinion regarding the future performance of a security. Underweight will usually mean that the security is expected to underperform either its industry, sector, or even the market altogether.

US Dollar Index (DXY): A measure of the value of the U.S. dollar relative to majority of its most significant trading partners.

Valuation: the process of determining the current worth of an asset or company.

Valuation metric: assessment method to determine the valuation of an asset such as the P/E for equities.

Volatility: volatility is a measure for variation of price of a financial instrument over time.

EXPLANATION OF RISK LEVELS

For example, risk level R1 corresponds to a defensive risk profile. These indicators are based on the 1-year 95% Value at Risk (VaR). VaR is a measurement of the maximum amount a portfolio could lose under normal market conditions over a given period with a given probability. If the 1-year 95% VaR amounts to x%, this means that there is a 95% probability that the portfolio will not lose more than x% of its value in one year.

Risk classification	0 Lowest Risk	1 Low Risk	2 Medium Risk	3 High Risk	4 - Highest Risk
Loss	There is a 95% probability that the product will not depreciate in value in one year.	There is a 95% probability that the product will not lose more than 5% of its value in one year.	There is a 95% probability that the product will not lose more than 15% of its value in one year.	There is a 95% probability that the product will not lose more than 30% of its value in one year.	There is a minimum of 5% probability that the product will lose more than 30% of its value in one year.

This document, subject to modifications, is given for purely informative purposes and does not constitute a contract and should be treated as a marketing communication providing general investment overview, investment opportunities and strategies. The information contained in this document is given for information purposes only. Capitalised terms refer to the glossary attached to this document.

This document was prepared by Splitska Banka Private Banking division, a division within Splitska banka d.d. Because of the fact that this document is given for information purposes only, Croatian Financial Services Supervisory Agency (HANFA) as supervisory body Splitska bankad.d. did not approve this document and has no control over the content of it and it is not fully compliant with regulatory provisions that could be considered as investment advice in any way. The contents of this document are not intended to provide an investment service or an investment advice, and the document does not constitute and under no circumstances should it be considered in whole or in part as an offer, a solicitation, advice, a personal recommendation, or an invitation to make an offer or purchase, subscribe for or sell financial products referred to herein, or an invitation to invest in the class of assets mentioned herein from Splitska Banka Private Banking division or Splitska bankad.d. The information indicated in this document shall not to be considered as legal or fiscal or accounting advice. Some products described herein may not be suitable for all investors, and can present various risks, or result in a potential loss of the total invested amount, including a potential unlimited loss, and accordingly are reserved only for a certain category of investors, and/or adapted to investors who are sophisticated and familiar with these types of product(s) and understand the investment and the associated risks. No investment decision whatsoever may solely result from reading this document. Accordingly, before making an investment decision, each potential investor will be questioned by Splitska Banka Private Banking division at Splitska bankad.d. to determine his eligibility to subscribe for the envisaged product, and the compatibility of the investment with his investment profile and objectives. He should also consult his own independent financial, legal and tax advisers to obtain all the financial, legal and fiscal information which will allow him to appraise the characteristics and the risks of the envisaged product, as well as his fiscal treatment, in light of his own circumstances. The reader is warned that the placement of stock exchange orders requires full knowledge of the regulations and operation of the markets. Before investing, the reader must be aware of the rapid fluctuations that may occur on certain markets and their speculative nature or their lack of liquidity. It is possible that certain assets or categories of assets mentioned in the document are not appropriate investments for the reader. In certain cases, the investment made includes even an undeterminable high risk of loss that could exceed the initial investment. The full understanding and agreement to the related contractual and informative documentation including the documentation relating to the relevant risks is required from the potential investor prior to the subscription of any product(s) any investment. Neither Splitska bankad.d. nor Splitska Banka Private Banking division shall be held responsible for any consequences, including financial consequences, resulting from your investments in and/or your instructions in relation to investments in financial product(s) concluded on the basis of this document alone. This document is not intended to be distributed to a person or in a jurisdiction where such distribution would be restricted or illegal. It is the responsibility of any person in possession of this document to inform themselves of and to observe all applicable laws and regulations of relevant jurisdictions. This document is in no way intended to be distributed in or into the United States and the financial products referred to herein cannot be distributed or sold directly or indirectly in or into the United States or to any US person.

Any investment may have tax consequences and it is important to bear in mind that neither Splitska bankad.d. nor Splitska Banka Private Banking division provide any tax or legal advice. The level of taxation depends on individual circumstances and such levels and bases of taxation can change.

The communicated information is only relevant in value at the time at which it was drafted. The price and value of investments and the

income derived from them can go down as well as up. Changes in inflation, interest rates and the rate of exchange may have an adverse effect on the value, price and income of investments issued in a different currency from yours. The simulations and examples included in this document are provided only for indicative and illustration purposes and may vary depending on the market fluctuations and the information and views reflected in this document may change.
